This is the second book written by Tom Clancy which establishes him as a powerful storyteller, a global tactician of power politics and of military technology. Did he have a crystal ball with which to read the future? It seems he zoned in on the possible effects of Muslim terrorism *way* before the "real world" woke up to the truth ...An Ajzerbaijani Muslim student received special treatment at the Moscow University for his loyalty due to his good standing in the Communist Party. After 15 years in the Party, he attained the respect of his comrades, a good salary, an automobile and an above average position in his chosen field of study ... but beneath the surface ... he was seething with anger ... plotting revenge on the very people who provided him the opportunities for success. He blew up the largest oil producing field in the Soviet Union ... crippling the Soviet economy. The Politburo met to deal with the consequences - the possible collapse of the Soviet Union. US satellite intelligence picked up the seismic event and discovered the oil field was destroyed. Another

noteworthy discovery was: a shortage of car and truck batteries. At the same time, the Soviets were engaging in Peace Talks in Vienna, Austria. The Foreign Minister gave a press conference where he spoke of "deeds not words" as he described the Soviet's commitment to reduce and destroy nuclear weapons. This included a deadline of three years and site verification. Plus the Soviets proposed all signatories, USA, France, China, and the UK join in the negotiations. The "maskirovka 1" by the KGB had begun (masquerade 1). Another suspicious intelligence discovery made by the USA was four colonels in the Soviet Army were executed for falsifying "readiness" reports.

A few years ago, for reasons I couldn't remember if my life depended on it, I bought a book that didn't have to do with sports. It was Tom Clancy's Red Storm Rising. At the time I didn't have any knowledge whatsoever of military happenings in the world. I remembered the Gulf War as a nuisance that the news had aired for a month instead of sports (gasp!). Until RSR, I hadn't read a book that was longer than 300 pages. Sound familiar? I'm writing this review for those of you who are like I was. The first time I read Red Storm Rising, it took me about a week. I don't remember why (I have a terrible memory, don't I?), but I loved it, even though I didn't understand most of the jargon and tactics. I then embarked on a week of net-surfing to learn everything I could about the weapon systems Clancy described. I even borrowed a book from the library about the Cold War, and this is at age fifteen (my friends thought I was nuts). Then I read my new favorite book again, and I actually understood a lot of the air, land, and sea combat sequences. Anyway, one book doesn't make an addiction, so the next trip to the bookstore I bought "The Hunt for Red October". Take a look at its reviews and guess how I reacted to it. I was officially hooked on techno-thrillers. Today, I have every book in the Tom Clancy collection (except for the Net Forces and Powerplays), and I loved every one to one degree or another. I also have all or nearly all of Larry Bond's (who was a co-writer with Clancy on Red Storm Rising) and Stephen Coonts' books. These writers, along with Clancy, do their homework when writing their books.
