All About Nicolaus Copernicus (Full Biography)

Synopsis

Nicolaus Copernicus (19 February 1473 – 24 May 1543) was a Renaissance mathematician and astronomer who formulated a heliocentric model of the universe which placed the Sun, rather than the Earth, at the center. The publication of Copernicus' book, *De revolutionibus orbium coelestium* (On the Revolutions of the Celestial Spheres), just before his death in 1543, is considered a major event in the history of science. It began the Copernican Revolution and contributed importantly to the scientific revolution. Copernicus was born and died in Royal Prussia, a region of the Kingdom of Poland since 1466. Copernicus had a doctorate in canon law and, though without degrees, was a physician, polyglot, classics scholar, translator, governor, diplomat, and economist who in 1517 set down a quantity theory of money, a principal concept in economics to the present day, and formulated a version of Gresham's law in 1519, before Gresham.

Customer Reviews

This book is good "collection" of information about Copernicus, but I got the impression that this

information was more of a research paper with facts from the internet.

Learned something and quite enjoyed it too.

It seems like some articles from Wikipedia.

This book is the must must must must must have you might need it you will need it a lot
