Compound Interest Tables

Synopsis

A handy pocket guide with six major tables: (1) Future value of \$1, (2) Future value of \$1 per period, (3) Sinking fund factors, (4) Present value of \$1, (5) Present value of \$1 per period, (6) Partial Payment to amortize \$1. Tables cover all interest rates from 5% to 20% and include monthly, quarterly, semi-annual, and annual compounding. Each section has a complete description of how those values can be used, the purpose they serve, and examples. Yes, a financial calculator will produce these figures, but it is MUCH easier having them in easy-to-use tables with comprehensive explanations of how to use them.

Book Information

Paperback: 128 pages

Publisher: Contemporary Books (September 1979)

Language: English

Customer Reviews

People say, "Oh, you can get everything in here by using a financial calculator." Well, maybe, if you understand those devices -- but I don't, so this little book is way more useful. Also, it has a nice short section at the beginning of each chapter explaining what's there: future value, future value per period, sinking fund factors (what's that?), present value (very useful!), present value per period, and partial payment to amortize \$1. I like it.

This is a little book, only 125 pages, and that tells you that it does not contain a lot. Compounding is only monthly, quarterly, semiannually, and annually. Interest rates start at 5% and go up in big jumps--5,6,7,7.5,8, etc. to 20%. One can do better than this with a calculator on the internet.
